What does the Microsoft Certified IT Professional (Enterprise Administrator) course involve?

The Microsoft Certified IT Professional (Enterprise Administrator) is a certification that covers the full spectrum of Microsoft's operating system and server related network configurations. This certification course has a focus on real world situations giving students the tools to correctly manage large projects in an enterprise environment. This course provides students with the skills needed to run a highly efficient and modern data centre, with expertise in identity management, systems management, virtualisation, storage, and networking. It also provides skills in Windows infrastructure design and helps students to excel in working with Windows Server 2008 (R2).

What benefits does the course give the student in the Middle East employment market?

Enterprise administrators are recognised among their peers and managers as lead-

↑ Aditya Girish from Koenig says the MCITP (EA) course is essential for IT professionals.

“This course provides students with the skills needed to run a highly efficient and modern data centre, with expertise in identity management, systems management, virtualisation, storage, and networking.”

ers in Windows infrastructure design. The Microsoft Certified IT Professional (Enterprise Administrator) certification, distinguishes students as IT professionals committed to excellence in working with Windows Server 2008 (R2). Although students may have the experience behind them, it is still very important to keep qualifications up to date in a rapidly expanding and transforming industry. The Microsoft Certified IT Professional (Enterprise Administrator) certification will expand students knowledge base and skills, making them an important asset to future employers.

“ Although students may have the experience behind them, it is still very important to keep qualifications up to date in a rapidly expanding and transforming industry. ”

Is it an essential qualification for IT professionals?

This course is essential for anybody who wants to have a career in IT Infrastructure Management Services. This course is the base for the other advanced courses in ITIMS be it related to client and server management and monitoring (System Centre Configuration Manager, System Centre Operations Manager, Exchange, etc) or be it related to Security Management and Monitoring (Certified Ethical Hacking). Enterprise administrators are responsible for deploying mission-critical systems in a production environment. It is their job to ensure all solutions are installed correctly with minimal impact to business.

Who should attend the MCITP (EA) course?

The Microsoft Certified Enterprise Administration qualification is best for those who want to work within a medium to large sized company as an IT professional.
